FloatingSpaces, the new variable panel system by SieMatic, offers a multitude of design solutions that seamlessly blends the kitchen and living room into a uniform space. Matching panel shelves offer numerous possibilities to design unique elevations with a selection of colors and materials to create appealing accents. Such elements as ultra thin, 13-millimeter shelves create a fluid transition between rooms, which redefines traditional kitchen planning. "These exceptionally streamlined shelves are in keeping with our high standard of structural integrity, while bringing about a complete integration of the kitchen into the interior architecture of the home," explains Henkes.

Interior designers and architects selected Best of Year Product Design finalists via online vote from 660 submissions. A jury of leading architects and designers determined the winners. Over 86,000 votes were tallied in this year's competition.

Currently available in over 62 countries on five continents, SieMatic is an industry leader in the high-end kitchen segment with unyielding commitment to innovative engineering and manufacturing excellence.
